Re: Turbo Normalizer

Dear Craig

As I mentioned earlier, flying a C185 with amphibis is a handful when you are flying high altitude lakes in British Columbia.

Your STC turbo normalizer onto a factory Continental IO 520 makes this airplane on amphibis a superior performer. Imagine 30 inches of manifold pressure on a 5,000 ft high lake! This installation not only opens greater opportunities for adventure but also does it without decreasing the TBO of the engine.

Let me also say that the installation is one of the cleanest,neatest, non-invasive fits I have seen. The exhaust even exits on the right side.

Having tested the system in British Columbia this summer, I am truly a satisfied customer.

Regards,

William Zurcher
